

The Queen remembered

Rodney Atkinson

The British people and perhaps even the Queen herself did not fully grasp the world wide affection in which she was held and what influence she and, through her, the United Kingdom had throughout the World.

Queen Elizabeth II was always dignified, smiling, genuinely interested in her subjects, loved for her humour and optimism and a hard-working pillar of the Nation State and that vast collection of Nation States which is the British Commonwealth.

So many millions around the world have a feeling of great loss. A full-page headline in a German quality newspaper read "The world cries for the Queen". How many hundreds of millions of people throughout the world would refer to only one person as "the Queen". I reproduce here the words of a long-time friend Bernard Chalumeau, President of the Alliance for the Sovereignty of France:

Here too, we all feel to have lost someone in our own family. We all thought she was eternal: at all the ages of her life, she was so pretty, so smiling, so present, so brave, so close. She was the United Kingdom! She embodied the United Kingdom! Before her death, we were very close, after we are even closer! It is the miracle of sovereignty which, throughout the world, brings together free peoples. Never forget her! Never!

The Queen was always well received in France - she was after all the Duke of Normandy! The Queen was always cheerful, kind and optimistic - how much more powerful than a thousand international treaties! As she said many years ago:

"I cannot lead you into battle, I do not give you laws or administer justice, but I can do something else. I can give you my heart and my devotion to these old islands and to all the peoples of our brotherhood of nations."

Only because she loved her own people could she show compassion for other nations. She did indeed touch the hearts of millions around the world. She was genuinely interested in people and in her own Government and having appointed 15 Prime Ministers she could offer a wise historical word to temper the fevered brow of politics. And she had a ready wit. Like Queen Victoria, Elizabeth loved her home in Windsor Castle close to Heathrow Airport. When visiting Surrey she talked to a resident plagued by the noise of aircraft flying into Gatwick airport "like your Majesty at Windsor". "Yes", the Queen replied - "we are thinking of moving"

But successive governments manipulated her into doing their nefarious work - not least on granting Crown Prerogative powers to sign the European Treaties which removed her own sovereignty and that of her subjects. Many thought she should have spoken out publicly and even those who understood how she could not be involved with politics nevertheless thought that the loss of constitutional power was a different matter. What should disturb all true democrats is that despite a mailbag full of her Subjects' fears for their and her Sovereignty, even the Queen felt cowed into silence by the State of which she was the Head.....

Floral Tribute (Lily of the Valley was her favourite flower) by the Poet Laureate Simon Armitage:

Evening will come, however determined the late afternoon,

Limes and oaks in their last green flush, pearled in September mist.

I have conjured a lily to light these hours, a token of thanks,

Zones and auras of soft glare framing the brilliant globes.

A promise made and kept for life – that was your gift –

Because of which, here is a gift in return, glovewort to some,

Each shining bonnet guarded by stern lance-like leaves.

The country loaded its whole self into your slender hands,

Hands that can rest, now, relieved of a century's weight.

Evening has come. Rain on the black lochs and dark Munros.

Lily of the Valley, a namesake almost, a favourite flower

Interlaced with your famous bouquets, the restrained

Zeal and forceful grace of its lanterns, each inflorescence

A silent bell disguising a singular voice. A blurred new day

Breaks uncrowned on remote peaks and public parks, and

Everything turns on these luminous petals and deep roots,

This lily that thrives between spire and tree, whose brightness

Holds and glows beyond the life and border of its bloom

EU lifts some Russian sanctions

Wester Van Gaal

The European Union has lifted some restrictions on the trade and financing of Russian coal, and some chemicals, to avoid an energy and food security crisis in poorer countries.

Coal “should be allowed to combat food and energy insecurity around the world,” the EU Commission wrote in guidance shared with EU member states on Monday (19th September).

Animal feed and some chemicals used in fertilisers and fuels are also allowed to be financed and shipped by EU operators to third countries.

A group of EU countries, including Poland and the Baltic nations, have criticised the partial loosening of sanctions, fearing it will further support Russian war efforts.

But EU efforts to quit Russian fossil fuels are hamstrung by the inherent risk it poses to global energy and food security.

The resurgent coal demand, driven by Europe’s energy and gas crunch, has pushed prices to \$441 per tonne, a near all-time high, threatening energy security all over the globe.

And new research by the Bank of

International Settlements, the Basel-based supervisor of central banks, suggests the effects of the EU embargo on Russian oil, which will come into force on 5th December, may even be more profound.

“We argue that a substitution of Russian oil exports would be difficult, implying that restrictions on these exports may result in large and persistent price increases for oil-related products,” the study’s authors, Fernando Avalos and Wenqian Huang, wrote on Sunday (18th September).

This could increase the price of grain, maize and other foods such as soybeans for years by boosting the use of biofuels, such as ethanol and biodiesel.

“Higher oil prices create incentives for gasoline blenders to increase the ethanol content in their product,” the authors write.

Although this can moderate the surge in oil prices, it would also increase the demand for corn, sugarcane, wheat, barley and sorghum and products used to produce biodiesel, such as palm oil, which is also used in

a wide range of processed foods.

Corn is especially important, with 40 percent of the US harvest, the world’s biggest corn producer, going to ethanol production.

With less corn available as foodstuff for cows, pigs and chickens, higher prices will spill over to replacements like soybeans, pushing up the price of meat.

EU sanctions do not directly target agricultural goods, but the embargo on Russian fossil fuels is likely to keep prices elevated, Avalos and Huang write.

“Understanding the complex interlinkages across commodity sectors is essential for policymakers if they are to ward off debilitating effects on energy and agricultural output,” they conclude.

“The EU is fully committed to avoiding that its sanctions unduly impact trade in critical items to third countries around the globe,” European commission spokesman Daniel Ferrie said in a statement.

Running costs

New research, conducted by the Royal Automobile Association (RAC), has revealed that the cost of using public charge points on a pay-as-you-go basis for electric cars in the UK has increased by as much as 42 per cent in the last four months.

Simon Williams, a spokesperson for the RAC, said: “It remains the case that charging away from home costs less than refuelling a petrol or diesel car,

but these figures show that the gap is narrowing as a result of the enormous increases in the cost of electricity.

“These figures very clearly show that it’s drivers who use public rapid and ultra-rapid chargers the most who are being hit the hardest.”

Despite this, a transport expert has insisted that drivers in Britain shouldn’t be discouraged for investing in an electric vehicle.

Automobile Association (AA) head of roads policy Jack Cousens said: “With domestic energy prices rising, drivers can be forgiven for believing switching to an Electric Vehicle (EV) will become expensive quickly.

“However, the reality is that even with the hike in domestic electricity costs, running an EV is considerably cheaper than a petrol or diesel car.”

Cost of living crisis

The cost-of-living crisis is causing enormous financial hardship for the British people.

An estimated 20,000 elderly citizens are going to freeze to death this winter because they cannot afford to heat their homes.

Taxpayer families are being squeezed by rising energy costs and inflation.

Yet, the government is still spending billions in taxes on illegal immigrants who have crossed the Channel.

This is totally unacceptable. At

times like this, the British people should be prioritised.

Britain First has launched an urgent complaints drive that we will send to the Home Office in a few days time .

CO2 Nature's gift

Derek Sterling

This book follows Nieboer's very successful book last year on the acquisition that CO₂ is creating global warming.

In this publication he produces many more facts and figures that support his approach on climate change.

He points out that the current dogma on global warming being caused by CO₂ levels depends on a single paramount falsehood. It is that carbon dioxide is a pollutant that acts as a blanket to trap heat radiated by Earth's surface so causing warming of the planet to an extent that imperils the very existence of humanity.

The information provided is split into four parts;

1) Describes the nature, properties and innumerable uses of the element Carbon and its astonishing compound carbon dioxide (CO₂). Included are explanations of how carbon provides the structure and the means of nutrition for all humanity, animals and plants. The oxygen we breathe we owe to photosynthesis of CO₂, sugar and H₂O. *To remove carbon is to remove life.*

2) Explains how CO₂ and H₂O keep Earth's temperature at 15°C. Shows

In these days many questions are being raised about free speech and what it actually means and who or how it may offend. Therefore, it is good to know that an organisation that supports free speech is available to all!

The following is the description that the organisation known as the Free Speech Union (freespeechunion.org) states as its policy;

"Free speech is the bedrock on which all our other freedoms rest, yet it is currently in greater peril than at any time since the Second World War. The Free Speech Union is a non-partisan, mass-membership public interest body that stands up for the speech rights of its members – and we recently opened

how greenhouse gasses absorb just 6% of solar energy from which CO₂ creates 20% of the greenhouse effect. Explains how absorbed solar energy rising by convection allows radiation to space at higher altitudes and cooling by descending cold air. *Describes how saturation of the absorbed wavelength bands with radiation means that doubling CO₂ only causes a 1% rise in temperature (3Wm²) or no more than 1°C.*

3) Shows that there is no causal correlation between increases in CO₂ and temperature. It defines the close correlation of temperature with solar activity. It demonstrates the invalidity of climate models of past temperature

Free speech

a Scottish office. If you think there's a risk you'll be penalised for exercising your legal right to free speech, whether it's in the workplace or the public square, you need the protection of the Free Speech Union. How might we protect you?

* If you find yourself being targeted by a digital outrage mob on social media for having exercised your legal right to free speech, we may mobilise an army of supporters.

* If a petition is launched calling for you to be fired, when you've done nothing other than exercise your legal right to free speech, we may help you organise a counter-petition.

* If you're no-platformed by a

and the distortions of predicted temperature. It explains how satellite data shows that temperature has risen by just 0.27% since 1980 and that there has been no warming trend since 1998.

4) Describes the miracle of photosynthesis of Nature using CO₂ sunlight and water to form sugar and starch in plants as energy stores. Transpiration, respiration and photo-respiration are explained and how present CO₂ levels are 3 times lower than optimum. It explains the devastating effects on growth and survival of plants of falling levels of CO₂ and shows how rises in CO₂ result in abundant crop yields and values.

One of the conclusions he draws is that we must regain self sufficiency in energy - energy that is abundant and affordable. This can only be guaranteed by exploiting the fossil fuels that lie under the surface of our lands and seas in the knowledge that emissions of CO₂ can only be of benefit to all humanity.

After reading this very informative publication, no one should be left in any doubt as to the requirement of maintaining high CO₂ levels.

university - a feminist professor who challenges trans orthodoxy, for instance - we'll encourage you to fight-back and members of our advisory councils may be able to tell you what remedies are available to you.

Fixing the energy price crisis

The UK government has recently announced a cap on energy charges for UK consumers, but is there a further way to help the consumer?

The following was taken from a cost sheet number 5 produced by Net Zero Watch, prior to the further government announcements.

Introduction

The futures markets are signalling that the energy crisis will continue unabated for more than three years. If this is allowed to happen, the results will be catastrophic.

This fact-sheet presents concrete steps that the Government can take to reduce energy prices in the next two winters. Regarding the latter, it is vital that steps are taken immediately, so that the gains are delivered in time.

The measures are unapologetically radical. Two decades of conventional wisdom have resulted in the current crisis. Fixing the problem will take many years, and the situation will only start to improve once we move to a radically new path.

For each measure, rough estimates of the benefits are given in total, and in per-household terms, the latter figure arrived at by dividing by 27 million. Consumers would experience some of these savings through bill reductions, and some through reductions in the cost of living.

Winter 2022–23 - Some measures can provide relief in winter 2022–23:

* Suspend the Emissions Trading System - Large energy users, including, critically, the gas-fired power stations that set market prices, pay £70–80 to emit a tonne of CO₂¹. Those marginal power stations currently emit 0.41tCO₂/MWh², so emission permits are adding up to £30 per megawatt hour, which equates to £10 billion over the market as a whole³, or around £370 per household. Leaving in place a fixed carbon allowance of, say, £20/t would reduce the savings to £8 billion, or £300 per household.

* French electricity connectors - Since the spring, French electricity prices have been around €80 higher than in the UK. The futures markets are signalling that this differential will become much larger in the next 12 months. Marginal generators in the UK therefore export power rather than supply to the local market, pushing up UK electricity prices across the board. The interconnectors should be restricted to system balancing and emergency use only, through formal agreement with the French. At €80, savings would amount to £22 billion, or £810 per household⁴.

* Reduce the value of ROCs to zero - Wind and solar operating under the Renewables Obligation are currently earning very high market prices, with a very high subsidy on top. These generators have a right to Renewables Obligation Certificates, but their value is set by the Government, and can be reduced to zero. The scheme is expected to cost £6.8 billion in 2022–23⁵, amounting to £229 per household.

* Other direct savings - Cancelling green spending programmes – subsidies for EVs, EV chargers, heat pumps and so on – as well as cancelling the Smart Meter Programme and the mandate for ethanol in petrol would bring up to another £3 billion saving, or £111 per household⁶.

Summary

If all these measures taken together, the total savings delivered for winter 2022–23 would thus amount to £41 billion, or just over £1,500 per household.

Winter 2023–24 - As noted in the introduction, energy prices are unlikely to return to normal before winter 2023–24. Actions that bring savings on timescales of 1–2 years therefore come into play. In each case, immediate action is required to ensure the benefits are delivered on the timescale indicated:

* Replacing marginal gas generation plant - Electricity prices in the UK are

set by old, inefficient gas-fired power stations. Average thermal efficiency of UK gas-fired units is 48%. Marginal units will be lower. A 5% more efficient marginal unit reduces market prices by around £15/MWh⁷, bringing savings of £5 billion, or £184 per household. However, since net zero policies have destroyed investor confidence, plant replacement – new turbines, in other words would need to be paid for by the taxpayer. These should be dual fuel units – capable of running on gasoil, which is likely to be cheaper in times of tight gas supply. The government should also pay for gasoil storage facilities at the power stations. There may be a queue for new plant, so time is of the essence.

* A green light for shale gas - Giving a green light to onshore gas in the UK will reduce gas prices somewhat, although the effect will be limited. Any reduction will, however, reduce electricity market prices across the board. Speed is of the essence. With planning permission mostly having lapsed, it would be necessary for the Secretary of State to call in new applications as soon as they were filed. In addition, the Traffic Light System for seismic activity would need to be set at a rational level, perhaps through reference to the British Standard on Noise and Vibration. With these steps in place, gas might start to flow in 12 months. The effect on gas prices is hard to quantify, but a 10p/therm (2%) reduction would lower electricity prices by £15/MWh, a saving of £5 billion per year, or £184 per household. The saving in gas used for domestic heating and industrial heat would be around £1.5 billion, or £54 per household.

* Reduce exposure to high EU gas prices - Our marginal therm of gas, which often comes from the EU, is very expensive. European benchmark prices have reached €100/MWh, because of Russian cuts to supply to Germany, while LNG can be had for around €50/MWh. This raises market prices across the board. Eliminating this supply, and replacing it with LNG,

Fixing the energy price crisis

would therefore bring savings for consumers, perhaps of as much as £24 billion, or £894 per household *. Achieving this would involve securing new long-term supply contracts for LNG. It will also be necessary for gas-fired power stations to run sufficiently often to ensure that they can use the fuel delivered.

In total, further savings of £32 billion, or nearly £1,200 per household could be delivered.

Therefore, in the space of two or three years, costs could be reduced by £73 billion, or £2,695 per household.

Red herrings

Some steps that are widely proposed are in essence pleading by special interests, and will do nothing to help consumers in the short term anyway.

Insulation programmes

Most of the 'low-hanging' fruit of demand reduction – loft insulation, double glazing etc – has been

harvested. Programmes that go further will be very expensive, putting further pressure on households, will take years to deliver, and will often fail to meet expectations. Many previous such programmes have been disastrous, with millions of homes damaged by botched work.

Increasing renewables

Increasing renewables will increase electricity market prices, because it will increase the unit cost of gasfired power stations, which set market prices. The prices of all forms of generation are currently high, but, unlike fossil fuels, there is little hope of renewables ever becoming cheap.

Notes;

1) <https://www.statista.com/statistics/1322275/carbon-prices-united-kingdom-emission-trading-scheme/>

2) https://en.wikipedia.org/wiki/Spa_rk_spread

3. The Government's estimate is £10.6 billion. <https://www.gov.uk/government/>

[publications/uk-emissions-trading-scheme-and-carbon-price-support-apply-for-compensation/compensation-for-the-indirect-costs-of-the-uk-ets-and-the-cps-mechanism-guidance-for-applicants#fn:6](https://www.netzerowatch.com/content/uploads/2022/07/NetZero-Costsheet.pdf)

4. Marginal UK gas-fired plant generates at €140–150/MWh using LNG at €50. French electricity prices have been averaging €210/MWh in recent months. The differential of €80/MWh = £66/MWh. Applied to 334TWh of UK electricity production (per DUKES 2022), that equals £22bn.

5. <https://obr.uk/download/march-2022-economic-and-fiscal-outlook-supplementary-fiscal-tables-receipts-and-other/>

6. <https://www.netzerowatch.com/content/uploads/2022/07/NetZero-Costsheet.pdf>

7. At a gas price of 150p/therm.

8. €50 is £42. Multiplied by the UK's (non-power system) demand of 519TWh (per DUKES 2022) gives £22 billion.

UK's Brexit still unfinished business

Lester Taylor

Although I don't particularly like the word 'Brexit', because it can mean different things to different people, we must not forget our unfinished severance from the European Union.

Right now, we are still unwinding from the 2008 Credit Crunch, still on the ropes from the pandemic, heavily engaged in assisting Ukraine in its struggle with Russian aggression and now we're facing a cost-of-living crisis and an energy crisis that will cost us dear in financial and societal terms and may well cost us many lives too.

All of which we're now being told will stretch years into the future.

So, there will be a temptation in Westminster, especially amongst the Remainer/Rejoinder majority of them, to convince the new PM to put any Brexit issues on the back burner, in the hope they can keep those ties intact and

start a Re-join process in the future.

The new PM would be making a mistake by going down that route because not following through hard on the Northern Ireland Protocol Bill, even though the House of Lords intends to scupper it, risks badly upsetting the Northern Ireland unionist community - something that could endanger the Belfast Agreement and peace process.

Not following through hard with the Bill of Rights Bill, would ensure that the European Convention on Human Rights, through its courts, can continue to dictate who can come into the UK as well as stop us from removing criminals and the like.

The flow of rubber dinghies and lorries with unconventional passengers would continue unabated. And when the hotel space runs out, what then?

The people are quietly very angry

about these issues, but will become very vociferous, if the new Prime Minister decides to use the Russia Ukraine war or the cost-of-living crisis as an excuse to play nice with the EU over Northern Ireland and not grasp the nettle with the ECHR where our borders are concerned.

We must all be alert to the calls by many inside and outside the UK for 'Europe' to pool all its money, resources, and defence assets in order to address these pressing Ukraine and cost-of-living crisis issues.

But that's pure Rejoinder speak. So don't fall for it! Our answer must be, to point out that it was the last twenty plus years of pooling our resources that got us here in the first place.

Lester Taylor, Is the United Kingdom Independence Party spokesman for Brexit and Northern Ireland.

Tel: 08456 120 175 email: info@junepress.com

Miles please

Dear Editor,

The latest outbreak of Avian bird flu has yet again exposed the governments belief that we are still in the EU. They under their Defra organisation have called for a 3km exclusion zone around infected areas. Surely the time has come to use Miles as used in the UK road signs, and the UK measurement not Kilometres an EU measurement.

Clearly our civil servants and government appointees have not yet understood what UK independence actually means, or are they hoping that we will rejoin the EU and give up our hard fought independence.

SARAH EVANS
Monmouthshire

Energy costs

Dear Editor,

I am writing to whole heartedly support the article in *eurofacts* (9th September) by Rebecca Davis regarding the way we pay for our energy.

Her suggestion that there should be a cheaper rate for those who use minimum quantities of power, plus removal of the Standing supply charge should be taken seriously. This would help those struggling to pay for basic energy needs and keep warm this winter.

CHARLOTTE RICHARDS
Birmingham

Imperial Weights and Measures

Dear Editor,

Now that we are outside the control of the EU surely it is time to bring back the freedom of choice.

Many countries in the world use imperial measurements, with the need for increasing our exports the time has come to be realistic.

All products should be clearly

labelled with imperial and metric measurements with equal emphasis on both.

The government has claimed to be looking into the subject, why? No need to waste time and money on research just get on and do it.

DAVID MITCHELL
West Midlands

Immigration

Dear Sir/Madam,

While we have become used to the rise in illegal immigrants freely crossing the English Channel by boat costing the UK £millions the new government appears to have no answer to the problem.

How can any sovereign country just accept this behaviour, surely it is time to act. Tony Abbot in Australia acted by forcing those boats away from Australia and although many of the do-gooders society complained about his actions, the result proved positive.

Unfortunately in the UK it appears that our elected politicians do not have the will power, or the real desire to take such action as is needed.

MICHAEL CLARK
Avon

Woke talk

Dear Editor,

I was shocked to read a report regarding recruitment to the UK's Royal Air Force (RAF) that claimed the RAF has put a *pause* on hiring white males. Surely recruitment should be open to all provided they have the ability and aptitude to work in our armed forces.

The only reason that I can see for this kind of behaviour is to appease the woke society that appears to be taking control of this once proud country.

Furthermore, it appears that Free Speech in our Universities has now being curtailed in order not to offend any person or group. The idea of speakers with different values and

ideas has always being a key lesson in learning, how do you learn if you never hear all sides of any argument or idea? Clearly the powers that be do not want our students to understand other groups or ideas but just accept the current values and goals set by the reigning society.

This type of control has been further extended by the ability of any group or person that overhears someone else's conversation to be offended if they don't like its content. They can then contact the police to take action against those individuals.

Healthy debate has always been a corner stone of democracy, but no longer, we live under the powers of the woke society.

SIMON CLARK
London

Commonwealth

Dear Sir,

The sad death of our Queen Elizabeth and the response around the world to this news should remind our elected politicians, that we have more in common with the 54 members of the Commonwealth that contain a third of the world population than the EU.

When it comes to trade we should be targeting these countries much more, alongside the rest of the world than trying to deal with a fortress dying protectionist EU.

The outburst from the president of the E. Commission Ursula von der Leyen, making, what can only be described as a threatening speech to the Italians for voting in a democratically elected government should put the fear into all member countries of the EU.

The EU is heading for a dictatorship future where only those unelected leaders will be in total control of the rights and obligations of its citizens. So much for those who try and pretend that the EU is any kind of democratic organisation.

Worlds Apart

by *Mica Jay*

£7.99 - Pbk -2017 - 111 pp

An intriguing novel about how a cosmic explorer who crashes to earth in the Amazon jungle becomes a cosmic celebrity and his effect on a remote tribal community.

Triumph and Tragedy 1991-2016

The Wokingham Mental Health Crisis House Twenty-Five Year History

by *Pam Jenkinson*

£11.99 - Pbk 2016 - 299 pp

One woman's fight to help the so-called mentally ill back into a real life working and living situation. With true proven examples. How self help can work successfully if properly supported by truly caring voluntary people not the unsuccessful state system.

[Special Offer £7.00]

Montgomery

and the First War on terror
by *Robert Oulds*

£9.99 - Pbk - 2013 - 287

A period of Monty's career shows how he fought his wars on terror. Lessons that could just as easily be used today.

[Special Offer £6.50]

Climate

All Is Well, All Will Be Well
by *Jeremy Niebor*

£14.99 - Pamphlet - 2021 - 71 pp

How the dogma of global warming was first conceived and why. He argues how and why CO₂ is not the real source.

Climate - CO₂ natures gift

by *Jeremy Niebor*

£15.00 - Pamphlet -2022 - 77 pp

Provides full information as to why CO₂ is not a pollutant and does not form a blanket to trap heat radiated by Earth's surface, so it is not causing warming of the planet that the doom merchants say.

Corbyn's Britain

Land of the Superwoke:

A Travel Guide to Corbyn's Britain
by *Lee Rotherham*

£13.99 - Pbk - 2019 - 265 pp

With a foreword by Jacob Rees-Mogg MP, a look into the past and possible future of a Hard Left Government.
